## **GOTEBORG**

A fireplace that reinterprets large olden-day fireplaces in a contemporary style. The refined geometric forms and juxtaposition of materials, such as majolica, glass and steel, are emphasised by the volumes, profiles and inclinations. The firebox is equipped with a panoramic glass featuring an exclusive electrically-operated lift mechanism.

The two large majolica panels lining the base and the raised firebox element can be finished in any colour of the extensive Piazzetta range. The steel parts are available in the Bianco, Nero or Cor-ten

coated finishes to optimally blend in with the setting (in the picture, Bianco majolica, Bianco-coated steel structure, M180 R wood-burning firebox).
